Art Unit: 1711

Application/Control Number: 10/773,296

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-4 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-6 of copending Application No. 10/768,674. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant claims encompass the claimed polycarbodiimide of the copending application.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Application/Control Number: 10/773,296

Art Unit: 1711

3. Claims 1-4 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 and 6-8 of copending Application No. 10/934,727. Although the conflicting claims are not identical, they are not patentably distinct from each other because the polycarbodiimide of the instant claims is obvious in view of the polycarbodiimide within the copending claims.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

4. Claims 1-4 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-9 of copending Application No. 10/757,512. Although the conflicting claims are not identical, they are not patentably distinct from each other because the polycarbodiimide of the instant claims is obvious in view of the polycarbodiimide within the copending claims.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/773,296

Art Unit: 1711

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claim 5 is rejected under 35 U.S.C. 102(b) as being anticipated by Saito et al. ('214).

Patentees disclose the production of polycarbodiimide copolymers, wherein naphthalene diisocyanate is disclosed as being an especially preferred reactant; therefore, applicants' claimed molar amount is considered to be inherently met. See column 1, lines 54+ and column 2, line 35. Patentees further disclose that the terminals of the polycarbodiimides may be capped with monoisocyanates at column 4, lines 20 and 21. Lastly, patentees disclose reaction temperatures within the examples that meet those claimed.

7. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Saito et al. (*214).

As aforementioned, patentees disclose the production of polycarbodiimide copolymers, wherein naphthalene diisocyanate is disclosed as being an especially preferred reactant. See column 1, lines 54+ and column 2, line 35. Patentees further disclose solutions of the polycarbodiimides in aprotic solvents and termination of the polycarbodiimides with monoisocyanates at column 4, lines 20+.

Application/Control Number: 10/773,296

Art Unit: 1711

Page 5

8. Though patentees fail to disclose applicants' claimed relationship between formula (1) and formula (2), the position is taken that the production of polycarbodiimide copolymers that satisfy the claims would have been obvious, given the broad range of ratios between formula (1) and formula (2) encompassed by the claims and in view of the fact that patentees specifically

and remain (2) encompassed by the claims and in view of the fact that patentees specificant

recite copolymers and the preferred use of naphthalene diisocyanate.

Any inquiry concerning this communication should be directed to R. Sergent at telephone number (571) 272-1079.
